

Guilherme Marson D' Paulo Garcia

São Paulo, SP, Brazil | (11) 97236-0614 | guimarsondpgarcia@gmail.com | github.com/guilhermemdpg | gitlab.com/gmdpg98 | guilhermemarson.dev | linkedin.com/in/guilherme-marson-d-paulo-garcia-b18b241b5

SUMMARY

Software Engineer with a Bachelor's degree in Computer Science and experience in **Full Stack Development, Infrastructure, and DevOps**, working on the evolution and modernization of web systems and mission-critical environments. Hands-on experience with **C#/NET, Vue.js, Python, SQL, Linux, Docker, and AWS**, as well as automation, observability, and production application support. Experienced in **legacy system modernization, reusable solution development, and improving system reliability and operational efficiency**. Proactive professional focused on problem-solving, cross-functional collaboration, and delivering business value.

PROFESSIONAL EXPERIENCE

TOTVS JuriTIs | Mid-Level Software Developer

04/2026 – Present

- Contribute to the **evolution and maintenance of LegalDesk**, a web-based ERP for law firm management, developing new features, fixing bugs, and working **Full Stack with C#/NET and Vue.js**.
- Participate in the **gradual modernization of the legacy front end**, migrating screens and components from Durandal to **Vue.js** while preserving established business rules and behaviors to minimize risks and impact during the technology transition.
- Develop and enhance **reusable components and generic structures in Vue.js**, reducing duplication, standardizing behavior across screens, and improving the maintainability and evolution of the new front end.
- Review and improve **existing workflows and application logic** throughout the migration process, leveraging the robustness of the legacy system while identifying opportunities to simplify and enhance new interfaces and user flows.
- Collaborate with **UX, leadership, and fellow developers** to define and validate new screen behaviors, balancing user experience requirements, business rules, and technical constraints to ensure consistent product implementations.
- **Analyze and troubleshoot front-end and back-end issues**, investigating components, data grids, APIs, and business rules to implement solutions with minimal impact on existing functionality.

Hapvida | Infrastructure Analyst — TIVIT

02/2026 – 04/2026

- Worked within a **24x7 operations team supporting mission-critical environments**, triaging, investigating, and resolving incidents and service requests through ServiceNow, with **Linux and Windows troubleshooting** focused on service availability and stability.
- Performed **monitoring and observability using Zabbix, Grafana, and Datadog**, analyzing metrics, logs, and events to identify anomalies, support diagnostics, and accelerate incident response in production.
- Investigated **recurring failures in the medical exam export process** using Zabbix monitoring data, identifying patterns related to **database table locks** and providing technical findings that supported mitigation efforts and improved process reliability.
- Developed **operational automation using Python and Shell Script** for recurring low-complexity requests, designing solutions with the potential to automate **more than 40% of these tickets** and free up team capacity for higher-priority incidents.
- Participated in **production deployments and releases** alongside DevOps and Product teams using Azure, following controlled procedures to minimize risks during updates to critical environments.
- Received **consistent recognition for performance and quality of delivery**, particularly for proactive problem investigation, team collaboration, and continuous improvement of operational processes.

Eduxe | DevOps / Infrastructure & Development

09/2022 – 12/2025

- Progressed from **Operations to Software Development and later DevOps/Infrastructure**, expanding my responsibilities from support and data operations to development, automation, observability, and maintenance of critical environments serving approximately **200 customers**.

- Worked on the **restructuring and stabilization of critical environments**, managing Linux, Proxmox, AWS, Docker, Nginx, and pfSense while implementing monitoring and automation initiatives that contributed to an **approximately 40% reduction in critical production incidents**.
- Implemented **monitoring and observability with AWS CloudWatch and Grafana**, shifting operations from a predominantly reactive approach to proactive monitoring and reducing **incident detection time from hours to minutes**.
- Developed automation using **Python, Shell Script, and MySQL** for data migration, log management, service monitoring, automated failure remediation, and operational routines, reducing **internal process execution time by 40–50%** and eliminating recurring manual tasks.
- Contributed to the recovery, modernization, and maintenance of **Eduxe Class, Eduxe Go, and Eduxe ERP**, resolving **more than 12 critical issues** and improving deployment processes, contributing to an **approximately 30% reduction in support ticket resolution time**.
- Developed and optimized **microservices and integrations**, including webhooks and data migration processes, increasing service capacity to support **2 to 3 times more concurrent users** while reducing **synchronization failures by approximately 80%** in integration workflows.
- Structured **database and relationship documentation**, automating its generation and creating a navigable reference for the team, reducing technical onboarding from approximately **2–3 weeks to 3–4 days** and decreasing dependency on senior team members.
- Contributed to the **establishment of Support and DevOps functions**, promoting practices involving Git, automation, documentation, monitoring, and standardized deployments to improve traceability and operational maturity.

Web Designer | Freelancer

02/2020 – 09/2022

- Designed and developed **more than 15 websites** for clients from concept to deployment, working across the full development stack, including Adobe XD prototypes, responsive HTML/CSS, JavaScript interactivity, and WordPress CMS implementations, while maintaining a **client satisfaction rate above 95%** and a high rate of repeat business.

EDUCATION

Bachelor's Degree in Computer Science — Universidade Anhanguera, São Paulo, SP
2020 – 2023

English Language Course — Wizard Idiomas
2010 – 2016

TECHNICAL & SOFT SKILLS

- C#, SQL, Python, JavaScript, PHP, Laravel MVC, Vue.js, .NET MVC
- Windows, Ubuntu Linux, Debian Linux, macOS
- Git, GitHub, Bitbucket, GitLab
- AWS CloudWatch, AWS S3, AWS EC2, AWS Route 53
- Docker, Kubernetes, Grafana, Bash, Shell Script, Proxmox, pfSense Firewall, Nginx, Observability, Agile Methodologies
- MySQL, MongoDB, SQLite, PostgreSQL, Redis
- Microservices, Webhooks, Pandas, SQLAlchemy, Selenium, REST APIs
- Zabbix, Datadog, Azure, ServiceNow
- Proactivity, Teamwork, Knowledge Sharing, Problem-Solving

COURSES & CERTIFICATIONS

- Kubernetes Essentials (LINUXTips — 2025)
- Oracle Certified Foundations Associate (Oracle Academy — 2025)
- SQLite (Origamid — 2025)
- MongoDB (Udemy — 2024)
- Vue.js 2 Complete (Origamid — 2025)
- Complete MySQL (Udemy — 2023)
- JavaScript ES6+ (Origamid — 2021)
